

# Hadrian's "Replacement Front" ...a complete, new Door Frame and Door.

*In two simple steps*, old units can be rehabilitated and transformed into lockers with many of the unique and superior features of true **HADRIAN LOCKERS!**

The Hadrian locker door details: *Unsurpassed quality...Plus!*

- A true hollow metal door, with honeycomb core and a door length "piano" hinge. Its impact resistance and strength are unparalleled. And it closes silently.
- Single point latching, for years of maintenance-free reliability.
- Powder coated with a high performance organic polymer. Its resistance to abrasions and chemicals is unsurpassed. Choose from a large selection of standard colors and special anti-graffiti textured finishes.

## A TYPICAL SUCCESS STORY!

This retrofit photo story is but one, chosen from many similar projects. It documents the renovation of the locker systems in the **Brother Edmund Rice Catholic School**. With Hadrian's superior door, the school's physical plant was restored to *better than new* condition. And, renewed as well, was the faculty's and student body's sense of pride in place...*economically, easily and without major disruption, during class hours.*

### Step 1 Old door and hinge removal

Original condition of the school's lockers.

Doors are removed from hinges.

In this case history, where hinges had been welded on, they were chiseled off. Touch-up grinding was then required to create a flat surface. However, in most instances (see circled inset) the latch hook and/or frame hinge leaves do not interfere and can be left on.

Old doors and hinges are scrapped.
